OpsGate - Decision-maker documentation V2

CIO · CISO · Security architects · Risk committees

DailyOps.Tech · OpsGate · EN

Audience: CIO, CISO, security architects, risk committees
Product version: 1.2 / V2 batch (July 2026)
Maturity: V2 functional / pre-GA - see STATUS-V2.md
Vendor: DailyOps.Tech

1. What is it?

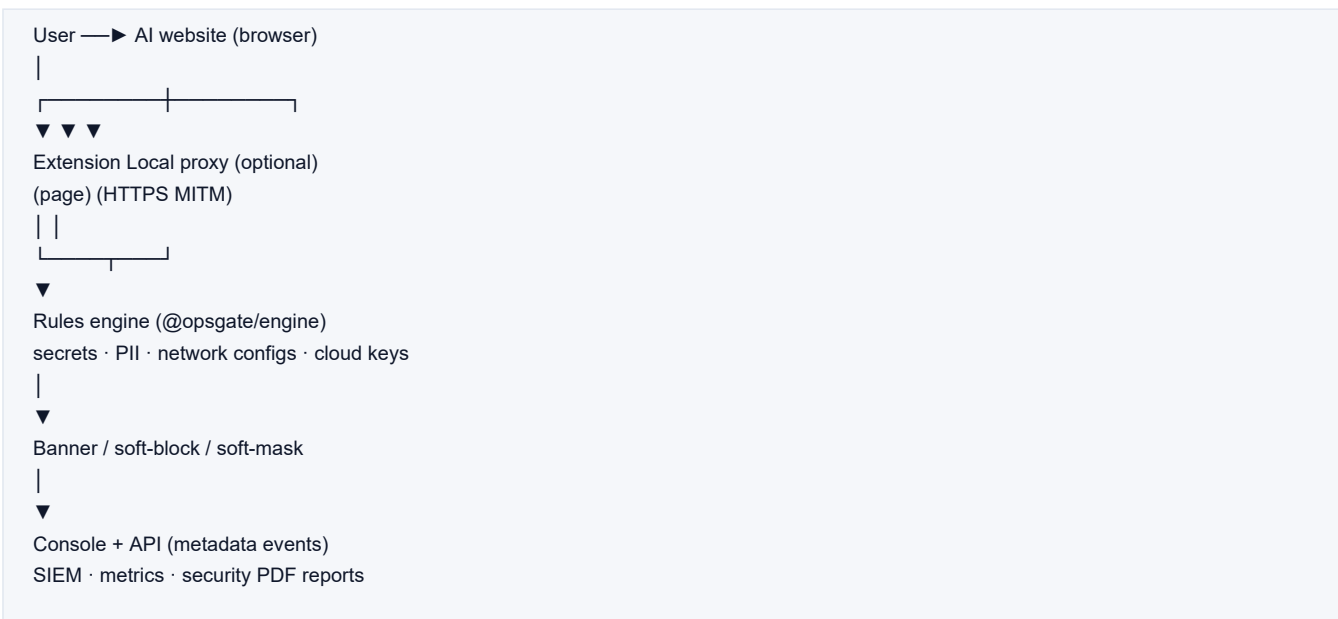

OpsGate is a lightweight data-loss prevention (DLP) product focused on generative AI tools (ChatGPT, Claude, Gemini, Copilot, Perplexity, and more).

It answers one question:

How do we let employees use AI freely without leaking secrets, customer data, or infrastructure configs?

OpsGate is not a full network CASB and not a conversation surveillance tool. It is a business safety net: local detection, clear user actions (mask / block / log), and central governance for IT and security teams.

2. How it works (60 seconds)

1. Detect in the browser (and/or proxy) before send.
2. Act: mask secrets, block, or log per policy.
3. Govern: admins set rules, groups, profiles, licenses.
4. Prove: events, audit, exports, SIEM, PDF reports.

3. What you protect

Category	Examples
App secrets	OpenAI/Anthropic keys, AWS, Azure, GCP, Stripe, JWT
Identity / PII	Emails, IBAN, payment cards (with FP controls)
Infrastructure	Fortinet, MikroTik, WireGuard, network snippets
Files	Text uploads, PDF/DOCX/PPTX/XLSX, image OCR (local Tesseract)

Privacy by design: local mode never leaves the device. Org mode sends metadata (rule type, decision, hostname) - not full prompts by default. File parse and OCR stay on the endpoint.

4. Layered architecture

Layer	Role	Why it matters
Extension Chrome / Edge / Firefox / Safari*	UX, banner, enroll	Fast rollout
Local proxy	Safety net when DOM breaks	Defense in depth
API + Postgres	Multi-tenant control plane + RLS	Governance & audit
Console	IT/SOC cockpit	Visibility & policy
SIEM / Prometheus	Existing SOC stack	No silo

*Safari: MV3 build + Apple/Xcode packaging.

5. Identity & access (admins)

Mechanism	Use
Password + TOTP MFA	Pilot / break-glass; required for multi-tenant
OIDC SSO (Entra, Okta...)	Enterprise default
SAML 2.0	Legacy IdPs; IdP signature required in prod
WebAuthn / passkeys	Windows Hello, fingerprint, FIDO2 keys
Concurrent session	10 s consent / read-only (anti-takeover)
SSO enforce	Disable local passwords
JIT	Create admin on first SSO
LDAP / AD	Group & user sync + cron

6. Deployment at scale

Channel	Description
Sideload	Pilot (build/chrome-mv3-prod)
Chrome Web Store + MDM force-install	Managed Windows fleet
Firefox AMO + policies.json	ESR / enterprise
Proxy MSI + portable Node	Silent service, PAC/GPO
Docker Postgres	Durable storage

7. Compliance, audit & continuity

Capability	Decision value
WORM audit (SHA-256 chain)	Integrity proof of admin actions
Legal audit retention (≥ 90 days)	Retention requirements alignment
Config + Postgres backup	Lightweight BCP / recovery
Scheduled exports + SIEM	Operational evidence for SOC
MSP multi-org	One operator governs many customers

Reduces: accidental AI leaks, blind spots, policy bypass (app lock + MDM).

Does not replace: full network DLP, cloud CASB, EDR, server-side LLM classification.

Recommendation: OpsGate complements EDR + proxy + SIEM for the AI-specific risk.

8. Pilot success metrics (30-90 days)

- % of endpoints with force-installed extension
- Mask/block events per week
- Policy deploy latency (force-sync < 2 min)
- "Secret pasted into ChatGPT" incidents before/after
- AI site coverage (host allowlist)

9. Product status & roadmap

Delivered (V1.x + V2 batch)	Next (pre-GA -> GA)
Multi-browser, proxy, SSO, multi-tenant MFA, passkeys, LDAP, SIEM, MSI	Real store listing (CWS/AMO/AppStore), customer pilot
PDF/DOCX/PPTX/XLSX scan + image OCR	Broader OCR languages, public Safari App Store
WORM audit, backup, multi-channel alerts, MSP portfolio	Stripe portal GA, full GDPR org soft-delete

Deployment: integrator guide [DEPLOIEMENT-CLIENT-EN.md](#) (+ PDF).
